Sunlink International introduces the first intelligent transportation technology for taxi service in HK

(Hong Kong, 7 December 2007) — **Sunlink International Holdings Limited (“Sunlink International” or the “Group”)** (stock code: 2336) today announced its subsidiary Spaceinet Sunlink Limited (“Spaceinet Sunlink”) introduced an intelligent transportation technology for the taxi industry in Hong Kong. Named TAXI4U, the innovative system is using the Group’s proprietary KENJI blackbox, which has been awarded by international logistic companies, and real-time backend vehicle tracking platform VTRACK4U to provide professional solutions. The solutions adopt GPS and advanced database processing technologies to integrate into the taxi operating system.

TAXI4U is the first intelligent dispatch system developed and implemented for the taxi industry. It has the support of many taxi associations, mobile communications operators and related government departments. Through the backend dispatch system and wireless communication network, taxi operators with their vehicles equipped with KENJI blackbox will be able to quickly inform drivers nearest to a customer who page a taxi. This service will not only improve the operational efficiency of taxi operations, but is also capable of keeping a detailed service record, hence can help to markedly enhance the reliability of taxi service to the convenience of passengers.

Mr. C.P. Kwok, Chief Operating Officer of Spaceinet Sunlink, said, “This first of its kind service has the intelligent transportation technology of Sunlink International at its core. The KENJI blackbox boasts high reliability and VTRACK4U has diverse functions. These advanced products plus the extensive experience of Spaceinet Sunlink in public transportation business, and the support and participation of taxi associations and the Hong Kong government all contributed to the successful launch of the TAXI4U service. A milestone in the development of taxi service in Hong Kong, the new service will take the local taxi industry into the new information age.”

Dr. Wong Shu Wing, Chairman of Sunlink International, said, “As a leading technology supplier of the public transportation sector, we are pleased to offer this professional solution to the local taxi industry. TAXI4U represents another breakthrough of the Group in the field of advanced technology. To ensure sustainable development of the Group, we will capitalise on our R&D expertise in real-time wireless information communication system to develop a comprehensive intelligent transportation system to service the public transportation and logistics industries. Looking ahead, we will continue to support the public transportation technology industry in Hong Kong as well as seek to extend and promote the TAXI4U service to other cities in China and other public transports. We look forward to capturing the immense market opportunities with our professional solutions in China in the advent of mega events including the 2008 Beijing Olympics, the 2010 World Expo and 2012 Asian Game.”

Mr. Brendon Tong, Chairman of Hong Kong Cab (Holdings) Limited, said, “We conducted a trial of the service earlier and are happy with the result. The service is expected to help operators improve operational efficiency, and more importantly, enhance the standard of taxi service and the professional image of the industry in rendering speedy and reliable service to locals and tourists. We see enormous room for development in the application of TAXI4U and will continue to work with Sunlink in developing quality and more diverse taxi services for passengers.”

TAXI4U is an intelligent dispatch system developed by Spaceinet Sunlink Limited, a joint venture set up by Sunlink International and Concord Pacific Satellite Technology. The service has undergone intensive and extensive testing to ensure its technical excellence in tackling the extreme urban landscape in Hong Kong to provide accurate tracking and transmission of real-time data on a wireless information communication system, its steady and reliable performance has been supported and recognized by the local taxi associations. Its easy-to-use features and ability to deliver high performance and tailored back-end to meet customers’ requirements are the key factors contributing to the success of TAXI4U system”.
